At Talk:JSW Steel, I noticed a bare signature at the top of the page dated 2012, and went to the history to see if I could trace the message that it had become detached from. I discovered that the history has only two entries, with the earlier one being from 2022. There's also an entry on the talk page from 2018. What's the story here? Early implementations of agile software development evolved in the mid-1990s. It has only been within the past few years that the human-computer interaction community have seen widespread acceptance of agile usability engineering. 9be8f80e0b The PMI guide Requirements Management: A Practical Guide recommends that a requirements tool should be identified at the beginning of the project, as [requirements] traceability can get complex and that switching tool mid-term could present a challenge. 9be8f80e0b == History == 9be8f80e0b == History == 9be8f80e0b Requirements verification and validation 9be8f80e0b According to ISO/IEC TR 24766:2009, six major tool capabilities exist: 9be8f80e0b

That does answer my question: it always was just that pair of signatures with no comment. Largoplazo (talk) 13:00, 17 September 2023 (UTC) I'm continuing to have problems with rendering references. I attempted to include five citations to an article I'm developing on my user page, involving four references and one split citation. For some reason, only the first reference rendered, the second, which I attempted to split, ended up with some rendering error, and the third and fourth never appeared at all. I have no idea what happened, but here is a link to that version of the page, and these are the references I attempted to cite: <http://reachrecords.com/about>, <http://reachrecords.com/artists/show/Lecrae>, <http://www.allmusic.com/artist/sho-baraka-mn0001000605>, <http://allhiphop.com/2012/04/08/five-christian-hip-hop-acts-you-should-know/>... 3family6 contribs 00:19, 7 July 2013 (UTC) The primary reference for disciplined agile delivery is the book Choose Your WoW!, written by Scott Ambler and Mark Lines. WoW refers to "way of working" or "ways of working".

Individuals like Kent Beck have helped to shape the methodology of agile usability engineering by working on projects such as the Chrysler Comprehensive Compensation System. Such time-driven projects have helped individuals experience and understand the best methodologies to practice while working in an agile environment. According to Cutter Senior Consultant Bhuvan Unhelkar, "DAD provides a carefully constructed mechanism that not only streamlines IT work, but more importantly, enables scaling." Paul Gorans and Philippe Kruchten call for more discipline in implementation of agile approaches and indicate that DAD, as an example framework, is "a hybrid agile approach to enterprise IT solution delivery that provides a solid foundation from which to scale." 9be8f80e0b
