Video game design Some common video game design subdisciplines are world design, level design, system design, content design, and user interface design. Soon, game complexity demanded team members focused on game design. Within the video game industry, video game design is usually just referred to as "game design", which is a more general term elsewhere. A number of early veterans chose the game design path eschewing programming and delegating Video game design is the process of designing the rules and content of video games in the pre-production stage and designing the gameplay, environment, storyline and characters in the production stage

The "engine" terminology is akin to the term "software engine" used more widely in the software industry. They are now used for serious games: A game engine is a software framework primarily designed for the development of video games which generally includes relevant libraries and support programs such as a level editor
