Comet If sufficiently close and bright, a comet may be seen from Earth without the aid of a telescope and can. Comet nuclei range from a few hundred meters to tens of kilometers across and are composed of loose collections of ice, dust, and small rocky particles. These phenomena are due to the effects of solar radiation and the outstreaming solar wind plasma acting upon the nucleus of the comet. This produces an extended, gravitationally unbound atmosphere or coma surrounding the nucleus, and sometimes a tail of gas and dust gas blown out from the coma. A comet is an icy, small Solar System body that warms and begins to release gases when passing close to the Sun, a process called outgassing. This produces A comet is an icy, small Solar System body that warms and begins to release gases when passing close to the Sun, a process called outgassing. The coma may be up to 15 times Earth's diameter, while the tail may stretch beyond one astronomical unit 6ea3c382e4

The practice would become widespread a decade later, particularly with the introduction of the British de Havilland Comet jetliner in Cabin pressurization is a process in which conditioned air is pumped into the cabin of an aircraft or spacecraft in order to create a safe and comfortable environment for humans flying at high altitudes. For aircraft, this air is usually bled off from the gas turbine engines at the compressor stage, and for spacecraft, it is carried in high-pressure, often cryogenic, tanks. cabin entered service 6ea3c382e4
