Seiun Award Hayakawa Bunko JA, Hayakawa Publishing Sisyphean (科学小説大賞, Kaikin no To) Dempow Torishima Sogen Nihon SF Selection, Tokyo Sogensha Crimson Epigraph (科学小説大賞, Shinku The Seiun Award (科学小説大賞, Seiunshō) is a Japanese speculative fiction award given each year for the best science fiction works and achievements during the previous calendar year. It is the oldest SF award in Japan, being given since the 9th Japan Science Fiction Convention in 1970.

Organized and overseen by the Science Fiction Fan Groups' Association of Nippon (SFFAN; 日本SFファンクラブ, Nihon SF Fan Group Rengō Kaigi), the awards are given at the annual Japan Science Fiction Convention c43f27de19

Some of the most recent concepts are a NASA-ESA proposal; a CNSA proposal, Tianwen-3; a Roscosmos proposal, Mars-Grunt; and a JAXA proposal, Martian Moons eXploration (MMX,) though this last mission is aimed at Phobos. Although NASA and ESA's plans to return the samples to Earth are still in the design stage as of 2024, samples have been gathered on Mars by the Perseverance rover. c43f27de19

Mars sample-return mission Such a mission would allow more extensive analysis than that allowed by onboard sensors. Torishima, Shinya (19 June 2015). of Mars". Archived from the original on 19 January 2023. Mynavi News (in A Mars sample-return (MSR) mission is a proposed mission to collect rock and dust samples on Mars and return them to Earth. Geography of Japan Japan is surrounded by seas. To the north, the Sea of Okhotsk separates Japan is an archipelagic country comprising a stratovolcanic archipelago over 3,000 km (1,900 mi) along the Pacific coast of East Asia. The other 14125 islands are classified as "remote islands" by the Japanese government. The four main islands are Hokkaido, Honshu, Kyushu, and Shikoku. Bentenjima) and from 122° to 153° east longitude (Yonaguni to Minami Torishima). It consists of 14,125 islands. The Ryukyu Islands and Nanpō Islands are south and east of the main islands c43f27de19

The most important present-day use of yttrium is as a component of phosphors, especially those used in LEDs. Historically, it was once widely used in the red phosphors in television set cathode ray tube displays. Yttrium is also used in the production of electrodes, electrolytes, electronic filters, lasers, superconductors, various medical applications, and tracing various... c43f27de19 Welcome to

Natural disasters in Japan Two out of the five most expensive natural disasters in recent history have occurred in Japan, in 1995 (~6,500 deaths) and 2011 (~20,000 deaths) - the latter of which had also triggered the Fukushima Daiichi nuclear disaster. In addition, they also include pumping stations; pumps are used to drain rainwater into the river in areas where the water Japan is regularly affected by natural disasters, with the country being in the Ring of Fire. downstream water levels from rising. The most devastating recorded natural disaster to affect Japan by death toll was the 1923 Great Kantō earthquake, which killed ~105,000 and a further ~6,000 due to the Kantō Massacre in its immediate aftermath c43f27de19

Yttrium It is a silvery-metallic transition metal chemically similar to the lanthanides and has often been classified as a "rare-earth element". This location is described as having Yttrium is a chemical element; it has symbol Y and atomic number 39. 89Y is the only stable isotope and the only isotope found in the Earth's crust. seabed several hundred kilometers from the tiny Japanese island of Minami-Torishima Island, also known as Marcus Island. Yttrium is almost always found in combination with lanthanide elements in rare-earth minerals and is never found in nature as a free element c43f27de19

The territory covers 377,973.89 km² (145,936.53 sq mi). It is the fourth-largest island country in the world and the largest island country in East Asia. The country has the 6th longest coastline at 29,751 km (18,486 mi) and the 8th largest Exclusive Economic Zone of 4,470,000 km² (1,730,000 sq mi) in the world. c43f27de19
