PDP-15 a memo that DEX was already trademarked by some paper company and I would have to rename the product. A later model, the PDP-15/76, was bundled with a complete PDP-11, allowing the PDP-15 to use peripherals for the PDP-11's popular Unibus system. It was the fifth and last of DEC's 18-bit machines, a series that had started in December 1959 with the PDP-1. I pointed out to them that software and paper mills The PDP-15 was an 18-bit minicomputer by Digital Equipment Corporation that first shipped in February 1970. More than 400 were ordered within the first eight months. The last PDP-15 was produced in 1979, with total sales of about 790 units b8fa31c76b

Spaced repetition The SM family of algorithms (SuperMemo#Algorithms), ranging from SM-0 (a paper-and-pencil prototype) to SM-18, which is built into SuperMemo 18 and 19. The use of spaced repetition has been proven to increase the rate of learning. Newly introduced and more difficult flashcards are shown more frequently, while older and less difficult flashcards are shown less frequently in order to exploit the psychological spacing effect. The Spaced repetition is an evidence-based learning technique that is usually performed with flashcards b8fa31c76b

In 1980, Microsoft formed a partnership with IBM to bundle Microsoft's operating system with IBM computers; with that deal, IBM paid Microsoft a royalty for every sale. In 1985, IBM requested Microsoft to develop a new operating system for their computers called OS/2. Microsoft produced that operating system, but also continued to sell their own alternative, which proved... b8fa31c76b

Timeline of scientific computing Laboratory Technical Memo TM-312-130, pages 38-44 (23 August 1961). "The maths that made Voyager possible" The following is a timeline of scientific computing, also known as computational science. Christopher Riley and Dallas Campbell, Oct 22, 2012 b8fa31c76b

List of aperiodic sets of tiles An example of such a tiling is shown in the adjacent diagram (see the image description for more information). A tiling is considered periodic if there exist translations in two independent directions which map the tiling onto itself. The tilings obtained from an aperiodic set of tiles. A tiling that cannot be constructed from a single primitive cell is called nonperiodic. Such a tiling is composed of a single fundamental unit or primitive cell which repeats endlessly and regularly in two independent directions. 1090/memo/0066, ISBN 978-0-8218-1266-2 Ollinger, Nicolas In geometry, a tiling is a partition of the plane (or any other geometric setting) into closed sets (called tiles), without gaps or overlaps (other than the boundaries of the tiles). If a given set of tiles allows only nonperiodic tilings, then this set of tiles is called aperiodic. Apollo 1 on June 9 by Seamans filing a seven-page memorandum documenting the selection process. The name Apollo 1, chosen by the crew, was made official by NASA in their honor after the fire. It was planned to launch on February 21, 1967, as the first low Earth orbital test of the Apollo command and service module. Webb eventually provided a controlled copy of Phillips's memo to Apollo 1, initially designated AS-204, was planned to be the first crewed mission of the Apollo program, the American undertaking to land the first man on the Moon. Chaffee—and destroyed the command module (CM). The mission never flew; a cabin fire during a launch rehearsal test at Cape Kennedy Air Force Station Launch Complex 34 on January 27 killed all three crew members—Command Pilot Gus Grissom, Senior Pilot Ed White, and Pilot Roger B b8fa31c76b

Although the principle is useful in many contexts, spaced repetition is commonly applied in contexts in which a learner must acquire many items and retain them indefinitely in memory. It is, therefore, well suited for the problem of vocabulary acquisition in the course of second-language learning. A number of spaced repetition software programs have been developed to aid the learning process. It is also possible to perform... b8fa31c76b The PDP-15 was essentially a version of the earlier PDP-9 that was constructed using small-scale integration integrated circuits, which made it smaller and less expensive than the PDP-9's flip chips which used individual transistors. A basic 8 kW PDP-9 cost about \$35,000 in 1968 (equivalent to \$316,000... b8fa31c76b

Thomas Callister Hales Memoirs of the American Mathematical Society. In representation theory he is known for his work on the Langlands program and the proof of the fundamental lemma over the group $\mathrm{Sp}(4)$ (many of his ideas were incorporated into the final proof of the fundamental lemma, due to Ngô Bảo Châu). In 2014, he announced the completion of the Flyspeck Project, which formally verified the correctness of his proof of the Kepler conjecture. 1090/MEMO/0476. 99 (476). Archived Thomas Callister Hales (born June 4, 1958) is an American mathematician working in the areas of representation theory, discrete geometry, and formal verification. (1992). In discrete geometry, he settled the Kepler conjecture on the density of sphere packings, the honeycomb conjecture, and the dodecahedral conjecture.
